

Three-dimensional extinction mapping using Gaussian random fields

Stuart Sale

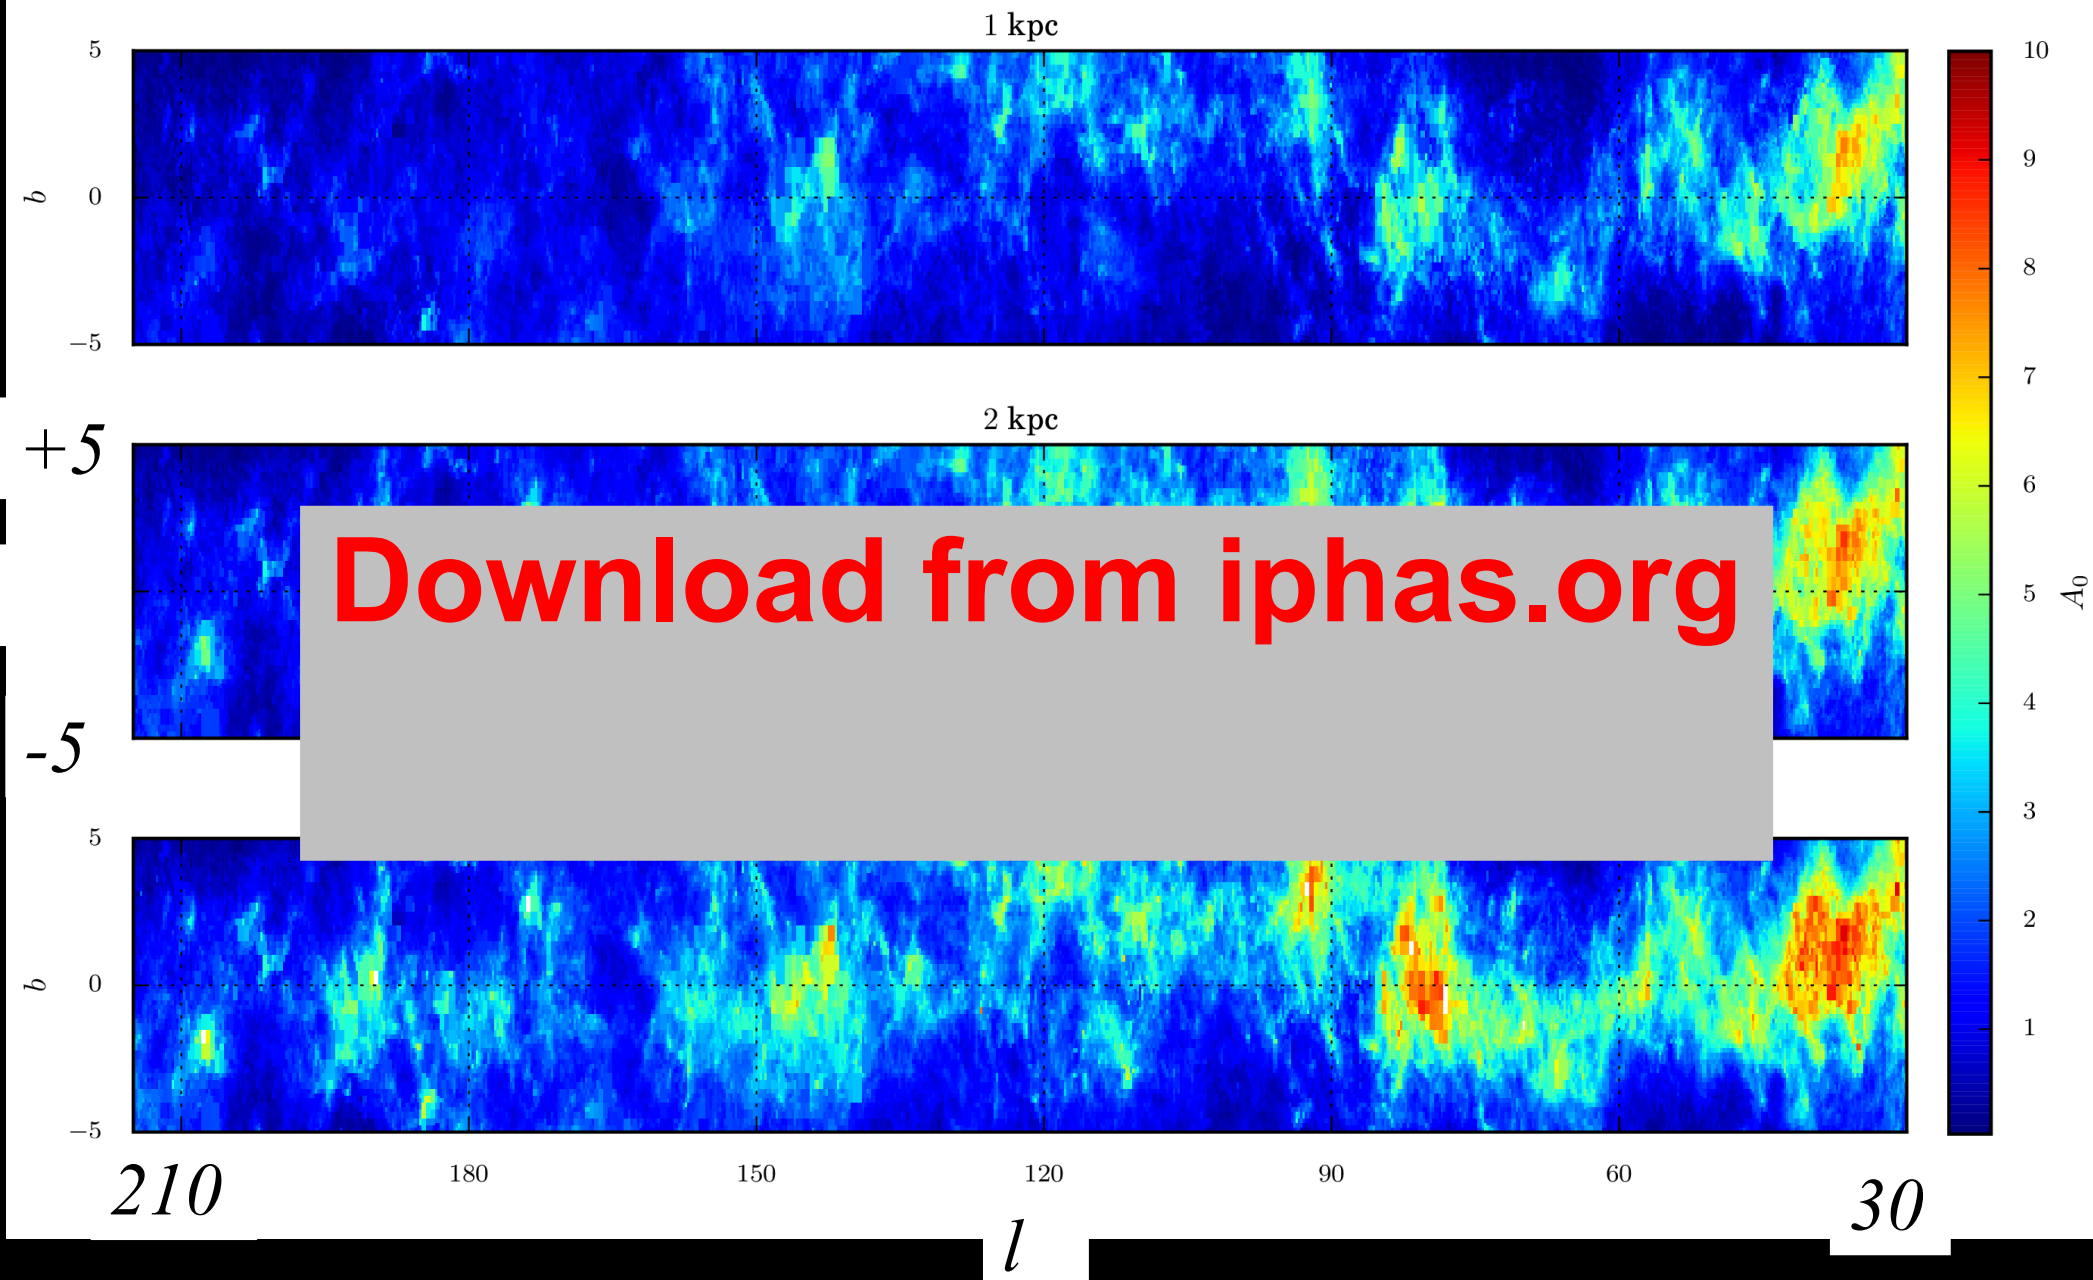

+ John Magorrian, Janet Drew, Geert Barentsen, Hywel Farnhill,
IPHAS consortium

Sale et al. (2014)

Sale et al. (2014)

The solution?

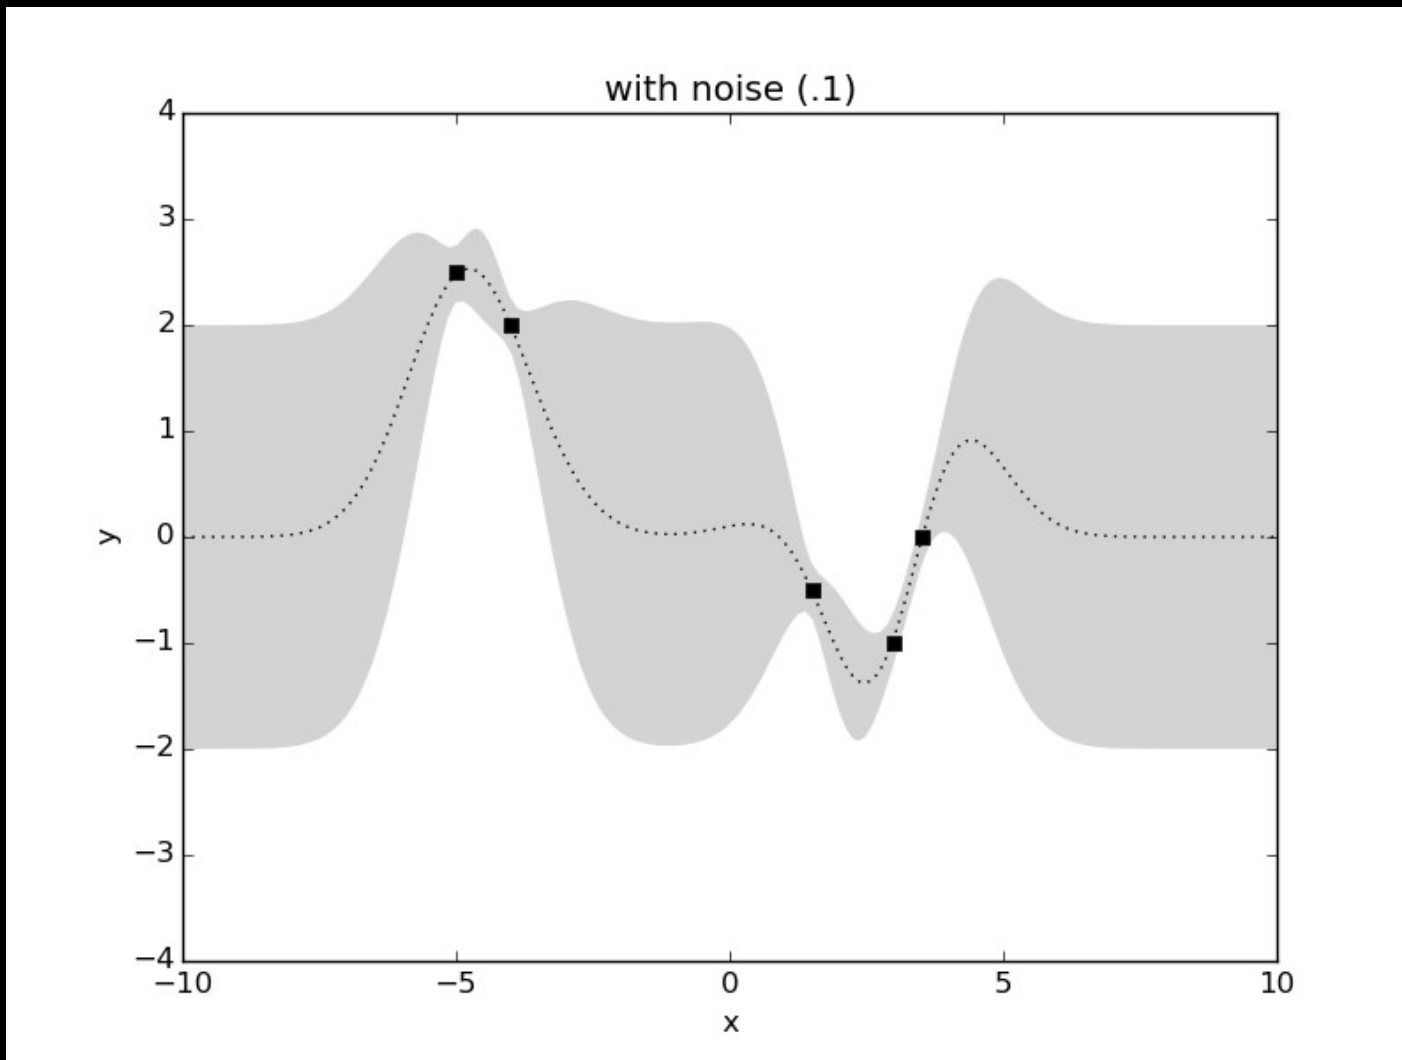

- Gaussian random fields
 - Gaussian processes in 2D or 3D space
- Continuously varying
 - Different values at every point
 - Limit of infinitely many infinitely small bins
- Value at one point correlated with values nearby

Gaussian Processes

Gaussian Processes

- Then add noise to data

Gaussian Processes

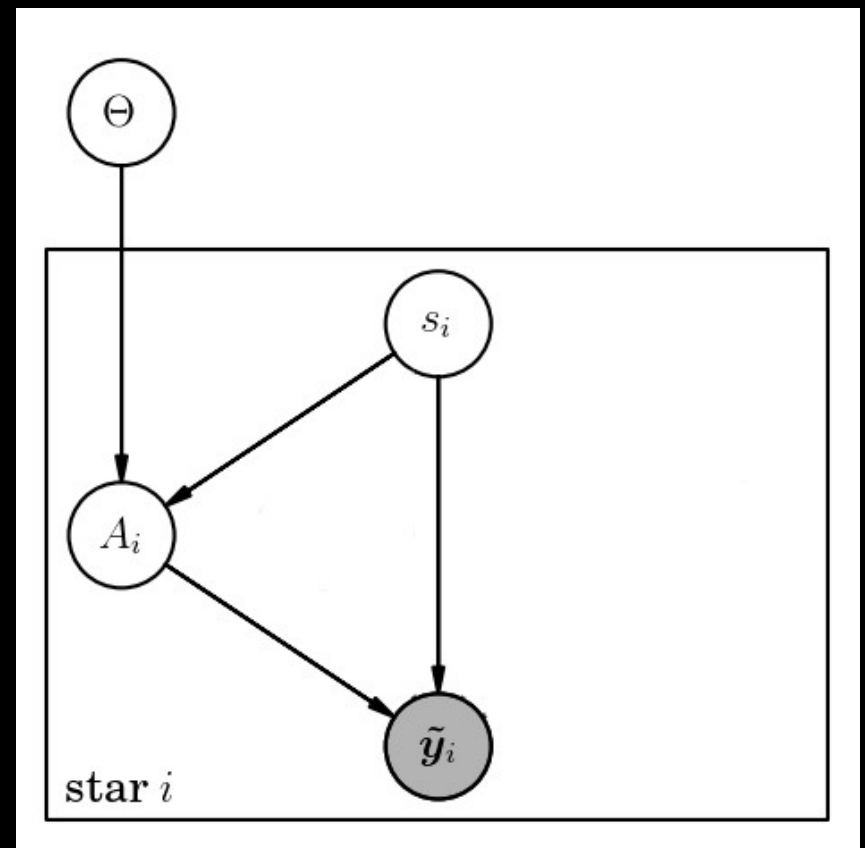

- Then add noise to data

- Want to find $p(\mathbf{s}, \mathbf{A}, \Theta \mid \mathbf{y})$
- $p(\mathbf{A} \mid \mathbf{s}, \Theta)$ is the GP
 $p(\mathbf{A} \mid \mathbf{s}, \Theta) \sim N(\mathbf{m}(\Theta), \mathbf{C})$
- Use MCMC to sample

- Want to find $p(\mathbf{s}, \mathbf{A}, \Theta \mid \mathbf{y})$
- $p(\mathbf{A} \mid \mathbf{s}, \Theta)$ is the GP
 $p(\mathbf{A} \mid \mathbf{s}, \Theta) \sim N(\mathbf{m}(\Theta), \mathbf{C})$
- Use MCMC to sample

Summary

- Extinction is a powerful probe of ISM
- Existing 'voxelised' methods struggle to produce realistic maps
- Using GRFs we can produce more precise & accurate maps
